	<b>Python Module Index</b>	<b>47</b>

Release v1.4.0. ([Installation](#)) Facebook Chat ([Messenger](#)) for Python. This project was inspired by [facebook-chat-api](#).

**No XMPP or API key is needed.** Just use your email and password.

Currently *fbchat* support Python 2.7, 3.4, 3.5 and 3.6:

*fbchat* works by emulating the browser. This means doing the exact same GET/POST requests and tricking Facebook into thinking it's accessing the website normally. Therefore, this API requires the credentials of a Facebook account.

---

**Note:** If you're having problems, please check the [FAQ](#), before asking questions on Github

---

<p><b>Warning:</b> We are not responsible if your account gets banned for spammy activities, such as sending lots of messages to people you don't know, sending messages very quickly, sending spammy looking URLs, logging in and out very quickly... Be responsible Facebook citizens.</p>
--

---

**Note:** Facebook now has an [official API](#) for chat bots, so if you're familiar with node.js, this might be what you're looking for.

---

If you're already familiar with the basics of how Facebook works internally, go to [Examples](#) to see example usage of *fbchat*

## 1.1 Installation

### 1.1.1 Pip Install fbchat

To install fbchat, run this command:

```
$ pip install fbchat
```

If you don't have pip installed, [this Python installation guide](#) can guide you through the process.

### 1.1.2 Get the Source Code

fbchat is developed on GitHub, where the code is [always available](#).

You can either clone the public repository:

```
$ git clone git://github.com/carpedm20/fbchat.git
```

Or, download a tarball:

```
$ curl -OL https://github.com/carpedm20/fbchat/tarball/master  
# optionally, zipball is also available (for Windows users).
```

Once you have a copy of the source, you can embed it in your own Python package, or install it into your site-packages easily:

```
$ python setup.py install
```

## 1.2 Introduction

*fbchat* uses your email and password to communicate with the Facebook server. That means that you should always store your password in a separate file, in case e.g. someone looks over your shoulder while you're writing code. You should also make sure that the file's access control is appropriately restrictive

### 1.2.1 Logging In

Simply create an instance of *Client*. If you have two factor authentication enabled, type the code in the terminal prompt (If you want to supply the code in another fashion, overwrite *Client.on2FACode*):

```
from fbchat import Client
from fbchat.models import *
client = Client('<email>', '<password>')
```

Replace <email> and <password> with your email and password respectively

---

**Note:** For ease of use then most of the code snippets in this document will assume you've already completed the login process. Though the second line, `from fbchat.models import *`, is not strictly necessary here, later code snippets will assume you've done this

---

If you want to change how verbose *fbchat* is, change the logging level (in *Client*)

Throughout your code, if you want to check whether you are still logged in, use *Client.isLoggedIn*. An example would be to login again if you've been logged out, using *Client.login*:

```
if not client.isLoggedIn():
    client.login('<email>', '<password>')
```

When you're done using the client, and want to securely logout, use *Client.logout*:

```
client.logout()
```

### 1.2.2 Threads

A thread can refer to two things: A Messenger group chat or a single Facebook user

*models.ThreadType* is an enumerator with two values: `USER` and `GROUP`. These will specify whether the thread is a single user chat or a group chat. This is required for many of *fbchat*'s functions, since Facebook differentiates between these two internally

Searching for group chats and finding their ID can be done via *Client.searchForGroups*, and searching for users is possible via *Client.searchForUsers*. See *Fetching Information*

You can get your own user ID by using *Client.uid*

Getting the ID of a group chat is fairly trivial otherwise, since you only need to navigate to <https://www.facebook.com/messages/>, click on the group you want to find the ID of, and then read the id from the address bar. The URL will look something like this: `https://www.facebook.com/messages/t/1234567890`, where 1234567890 would be the ID of the group. An image to illustrate this is shown below:

The same method can be applied to some user accounts, though if they've set a custom URL, then you'll just see that URL instead

Here's an snippet showing the usage of thread IDs and thread types, where `<user id>` and `<group id>` corresponds to the ID of a single user, and the ID of a group respectively:

```
client.send(Message(text='<message>'), thread_id='<user id>', thread_type=ThreadType.
↳USER)
client.send(Message(text='<message>'), thread_id='<group id>', thread_type=ThreadType.
↳GROUP)
```

Some functions (e.g. `Client.changeThreadColor`) don't require a thread type, so in these cases you just provide the thread ID:

```
client.changeThreadColor(ThreadColor.BILOBA_FLOWER, thread_id='<user id>')
client.changeThreadColor(ThreadColor.MESSENGER_BLUE, thread_id='<group id>')
```

### 1.2.3 Message IDs

Every message you send on Facebook has a unique ID, and every action you do in a thread, like changing a nickname or adding a person, has a unique ID too.

Some of *fbchat*'s functions require these ID's, like `Client.reactToMessage`, and some of them provide this ID, like `Client.sendMessage`. This snippet shows how to send a message, and then use the returned ID to react to that message with a emoji:

```
message_id = client.send(Message(text='message'), thread_id=thread_id, thread_
↳type=thread_type)
client.reactToMessage(message_id, MessageReaction.LOVE)
```

### 1.2.4 Interacting with Threads

*fbchat* provides multiple functions for interacting with threads

Most functionality works on all threads, though some things, like adding users to and removing users from a group chat, logically only works on group chats

The simplest way of using *fbchat* is to send a message. The following snippet will, as you've probably already figured out, send the message *test message* to your account:

```
message_id = client.send(Message(text='test message'), thread_id=client.uid, thread_
↳type=ThreadType.USER)
```

You can see a full example showing all the possible thread interactions with *fbchat* by going to [Examples](#)

## 1.2.5 Fetching Information

You can use *fbchat* to fetch basic information like user names, profile pictures, thread names and user IDs

You can retrieve a user's ID with `Client.searchForUsers`. The following snippet will search for users by their name, take the first (and most likely) user, and then get their user ID from the result:

```
users = client.searchForUsers('<name of user>')
user = users[0]
print("User's ID: {}".format(user.uid))
print("User's name: {}".format(user.name))
print("User's profile picture url: {}".format(user.photo))
print("User's main url: {}".format(user.url))
```

Since this uses Facebook's search functions, you don't have to specify the whole name, first names will usually be enough

You can see a full example showing all the possible ways to fetch information with *fbchat* by going to [Examples](#)

## 1.2.6 Sessions

*fbchat* provides functions to retrieve and set the session cookies. This will enable you to store the session cookies in a separate file, so that you don't have to login each time you start your script. Use `Client.getSession` to retrieve the cookies:

```
session_cookies = client.getSession()
```

Then you can use `Client.setSession`:

```
client.setSession(session_cookies)
```

Or you can set the `session_cookies` on your initial login. (If the session cookies are invalid, your email and password will be used to login instead):

```
client = Client('<email>', '<password>', session_cookies=session_cookies)
```

**Warning:** Your session cookies can be just as valuable as your password, so store them with equal care

## 1.2.7 Listening & Events

To use the listening functions *fbchat* offers (like `Client.listen`), you have to define what should be executed when certain events happen. By default, (most) events will just be a *logging.info* statement, meaning it will simply print information to the console when an event happens

---

**Note:** You can identify the event methods by their *on* prefix, e.g. `onMessage`

---

The event actions can be changed by subclassing the `Client`, and then overwriting the event methods:

```
class CustomClient(Client):
    def onMessage(self, author_id, message_object, thread_id, thread_type, ts,
↳ metadata, msg, **kwargs):
        # Do something with message_object here
```

(continues on next page)

(continued from previous page)

```

    pass

client = CustomClient('<email>', '<password>')

```

**Notice:** The following snippet is as equally valid as the previous one:

```

class CustomClient(Client):
    def onMessage(self, message_object, author_id, thread_id, thread_type, **kwargs):
        # Do something with message_object here
        pass

client = CustomClient('<email>', '<password>')

```

The change was in the parameters that our *onMessage* method took: *message\_object* and *author\_id* got swapped, and *mid*, *ts*, *metadata* and *msg* got removed, but the function still works, since we included *\*\*kwargs*

**Note:** Therefore, for both backwards and forwards compatibility, the API actually requires that you include *\*\*kwargs* as your final argument.

View the [Examples](#) to see some more examples illustrating the event system

## 1.3 Examples

These are a few examples on how to use *fbchat*. Remember to swap out *<email>* and *<password>* for your email and password

### 1.3.1 Basic example

This will show basic usage of *fbchat*

```

# -*- coding: UTF-8 -*-

from fbchat import Client
from fbchat.models import *

client = Client('<email>', '<password>')

print('Own id: {}'.format(client.uid))

client.send(Message(text='Hi me!'), thread_id=client.uid, thread_type=ThreadType.USER)

client.logout()

```

### 1.3.2 Interacting with Threads

This will interact with the thread in every way *fbchat* supports

```

# -*- coding: UTF-8 -*-

from fbchat import Client

```

(continues on next page)

(continued from previous page)

```
from fbchat.models import *

client = Client("<email>", "<password>")

thread_id = '1234567890'
thread_type = ThreadType.GROUP

# Will send a message to the thread
client.send(Message(text='<message>'), thread_id=thread_id, thread_type=thread_type)

# Will send the default `like` emoji
client.send(Message(emoji_size=EmojiSize.LARGE), thread_id=thread_id, thread_
↳type=thread_type)

# Will send the emoji ``
client.send(Message(text='', emoji_size=EmojiSize.LARGE), thread_id=thread_id, thread_
↳type=thread_type)

# Will send the sticker with ID `767334476626295`
client.send(Message(sticker=Sticker('767334476626295')), thread_id=thread_id, thread_
↳type=thread_type)

# Will send a message with a mention
client.send(Message(text='This is a @mention', mentions=[Mention(thread_id, offset=10,
↳ length=8)]), thread_id=thread_id, thread_type=thread_type)

# Will send the image located at `<image path>`
client.sendLocalImage('<image path>', message=Message(text='This is a local image'),
↳thread_id=thread_id, thread_type=thread_type)

# Will download the image at the url `<image url>`, and then send it
client.sendRemoteImage('<image url>', message=Message(text='This is a remote image'),
↳thread_id=thread_id, thread_type=thread_type)

# Only do these actions if the thread is a group
if thread_type == ThreadType.GROUP:
    # Will remove the user with ID `<user id>` from the thread
    client.removeUserFromGroup('<user id>', thread_id=thread_id)

    # Will add the user with ID `<user id>` to the thread
    client.addUsersToGroup('<user id>', thread_id=thread_id)

    # Will add the users with IDs `<1st user id>`, `<2nd user id>` and `<3th user id>`
    ↳ to the thread
    client.addUsersToGroup(['<1st user id>', '<2nd user id>', '<3rd user id>'],
↳thread_id=thread_id)

# Will change the nickname of the user `<user id>` to `<new nickname>`
client.changeNickname('<new nickname>', '<user id>', thread_id=thread_id, thread_
↳type=thread_type)

# Will change the title of the thread to `<title>`
client.changeThreadTitle('<title>', thread_id=thread_id, thread_type=thread_type)

# Will set the typing status of the thread to `TYPING`
```

(continues on next page)

(continued from previous page)

```

client.setTypingStatus(TypingStatus.TYPING, thread_id=thread_id, thread_type=thread_
↳type)

# Will change the thread color to `MESSENGER_BLUE`
client.changeThreadColor(ThreadColor.MESSENGER_BLUE, thread_id=thread_id)

# Will change the thread emoji to ``
client.changeThreadEmoji('', thread_id=thread_id)

# Will react to a message with a emoji
client.reactToMessage('<message id>', MessageReaction.LOVE)

```

### 1.3.3 Fetching Information

This will show the different ways of fetching information about users and threads

```

# -*- coding: UTF-8 -*-

from fbchat import Client
from fbchat.models import *

client = Client('<email>', '<password>')

# Fetches a list of all users you're currently chatting with, as `User` objects
users = client.fetchAllUsers()

print("users' IDs: {}".format(user.uid for user in users))
print("users' names: {}".format(user.name for user in users))

# If we have a user id, we can use `fetchUserInfo` to fetch a `User` object
user = client.fetchUserInfo('<user id>')['<user id>']
# We can also query both mutiple users together, which returns list of `User` objects
users = client.fetchUserInfo('<1st user id>', '<2nd user id>', '<3rd user id>')

print("user's name: {}".format(user.name))
print("users' names: {}".format(users[k].name for k in users))

# `searchForUsers` searches for the user and gives us a list of the results,
# and then we just take the first one, aka. the most likely one:
user = client.searchForUsers('<name of user>')[0]

print('user ID: {}'.format(user.uid))
print("user's name: {}".format(user.name))
print("user's photo: {}".format(user.photo))
print("Is user client's friend: {}".format(user.is_friend))

# Fetches a list of the 20 top threads you're currently chatting with
threads = client.fetchThreadList()
# Fetches the next 10 threads
threads += client.fetchThreadList(offset=20, limit=10)

print("Threads: {}".format(threads))

```

(continues on next page)

(continued from previous page)

```

# Gets the last 10 messages sent to the thread
messages = client.fetchThreadMessages(thread_id='<thread id>', limit=10)
# Since the message come in reversed order, reverse them
messages.reverse()

# Prints the content of all the messages
for message in messages:
    print(message.text)

# If we have a thread id, we can use `fetchThreadInfo` to fetch a `Thread` object
thread = client.fetchThreadInfo('<thread id>')['<thread id>']
print("thread's name: {}".format(thread.name))
print("thread's type: {}".format(thread.type))

# `searchForThreads` searches works like `searchForUsers`, but gives us a list of_
↳threads instead
thread = client.searchForThreads('<name of thread>')[0]
print("thread's name: {}".format(thread.name))
print("thread's type: {}".format(thread.type))

# Here should be an example of `getUnread`

```

### 1.3.4 Echobot

This will reply to any message with the same message

```

# -*- coding: UTF-8 -*-

from fbchat import log, Client

# Subclass fbchat.Client and override required methods
class EchoBot(Client):
    def onMessage(self, author_id, message_object, thread_id, thread_type, **kwargs):
        self.markAsDelivered(thread_id, message_object.uid)
        self.markAsRead(thread_id)

        log.info("{} from {} in {}".format(message_object, thread_id, thread_type.
↳name))

        # If you're not the author, echo
        if author_id != self.uid:
            self.send(message_object, thread_id=thread_id, thread_type=thread_type)

client = EchoBot("<email>", "<password>")
client.listen()

```

### 1.3.5 Remove Bot

This will remove a user from a group if they write the message *Remove me!*

```
# -*- coding: UTF-8 -*-

from fbchat import log, Client
from fbchat.models import *

class RemoveBot(Client):
    def onMessage(self, author_id, message_object, thread_id, thread_type, **kwargs):
        # We can only kick people from group chats, so no need to try if it's a user_
        ↪ chat
        if message_object.text == 'Remove me!' and thread_type == ThreadType.GROUP:
            log.info('{} will be removed from {}'.format(author_id, thread_id))
            self.removeUserFromGroup(author_id, thread_id=thread_id)
        else:
            # Sends the data to the inherited onMessage, so that we can still see_
            ↪ when a message is recieved
            super(RemoveBot, self).onMessage(author_id=author_id, message_
            ↪ object=message_object, thread_id=thread_id, thread_type=thread_type, **kwargs)

client = RemoveBot("<email>", "<password>")
client.listen()
```

### 1.3.6 “Prevent changes”-Bot

This will prevent chat color, emoji, nicknames and chat name from being changed. It will also prevent people from being added and removed

```
# -*- coding: UTF-8 -*-

from fbchat import log, Client
from fbchat.models import *

# Change this to your group id
old_thread_id = '1234567890'

# Change these to match your liking
old_color = ThreadColor.MESSENGER_BLUE
old_emoji = ''
old_title = 'Old group chat name'
old_nicknames = {
    '12345678901': "User nr. 1's nickname",
    '12345678902': "User nr. 2's nickname",
    '12345678903': "User nr. 3's nickname",
    '12345678904': "User nr. 4's nickname"
}

class KeepBot(Client):
    def onColorChange(self, author_id, new_color, thread_id, thread_type, **kwargs):
        if old_thread_id == thread_id and old_color != new_color:
            log.info("{} changed the thread color. It will be changed back".
            ↪ format(author_id))
            self.changeThreadColor(old_color, thread_id=thread_id)

    def onEmojiChange(self, author_id, new_emoji, thread_id, thread_type, **kwargs):
        if old_thread_id == thread_id and new_emoji != old_emoji:
            log.info("{} changed the thread emoji. It will be changed back".
            ↪ format(author_id))
```

(continues on next page)

(continued from previous page)

```

        self.changeThreadEmoji(old_emoji, thread_id=thread_id)

    def onPeopleAdded(self, added_ids, author_id, thread_id, **kwargs):
        if old_thread_id == thread_id and author_id != self.uid:
            log.info("{} got added. They will be removed".format(added_ids))
            for added_id in added_ids:
                self.removeUserFromGroup(added_id, thread_id=thread_id)

    def onPersonRemoved(self, removed_id, author_id, thread_id, **kwargs):
        # No point in trying to add ourself
        if old_thread_id == thread_id and removed_id != self.uid and author_id !=
↪self.uid:
            log.info("{} got removed. They will be re-added".format(removed_id))
            self.addUsersToGroup(removed_id, thread_id=thread_id)

    def onTitleChange(self, author_id, new_title, thread_id, thread_type, **kwargs):
        if old_thread_id == thread_id and old_title != new_title:
            log.info("{} changed the thread title. It will be changed back".
↪format(author_id))
            self.changeThreadTitle(old_title, thread_id=thread_id, thread_type=thread_
↪type)

    def onNicknameChange(self, author_id, changed_for, new_nickname, thread_id,
↪thread_type, **kwargs):
        if old_thread_id == thread_id and changed_for in old_nicknames and old_
↪nicknames[changed_for] != new_nickname:
            log.info("{} changed {}'s' nickname. It will be changed back".
↪format(author_id, changed_for))
            self.changeNickname(old_nicknames[changed_for], changed_for, thread_
↪id=thread_id, thread_type=thread_type)

client = KeepBot("<email>", "<password>")
client.listen()

```

## 1.4 Testing

To use the tests, copy `tests/data.json` to `tests/my_data.json` or type the information manually in the terminal prompts.

- email: Your (or a test user's) email / phone number
- password: Your (or a test user's) password
- group\_thread\_id: A test group that will be used to test group functionality
- user\_thread\_id: A person that will be used to test kick/add functionality (This user should be in the group)

Please remember to test all supported python versions. If you've made any changes to the 2FA functionality, test it with a 2FA enabled account.

If you only want to execute specific tests, pass the function names in the commandline (not including the `test_` prefix). Example:

```
$ python tests.py sendMessage sessions sendEmoji
```

**Warning:** Do not execute the full set of tests in too quick succession. This can get your account temporarily blocked for spam! (You should execute the script at max about 10 times a day)

## 1.5 Full API

If you are looking for information on a specific function, class, or method, this part of the documentation is for you.

### 1.5.1 Client

This is the main class of *fbchat*, which contains all the methods you use to interact with Facebook. You can extend this class, and overwrite the events, to provide custom event handling (mainly used while listening)

**class** `fbchat.Client` (*email, password, user\_agent=None, max\_tries=5, session\_cookies=None, logging\_level=logging.INFO*)

Initializes and logs in the client

#### Parameters

- **email** – Facebook *email, id* or *phone number*
- **password** – Facebook account password
- **user\_agent** – Custom user agent to use when sending requests. If *None*, user agent will be chosen from a premade list (see `utils.USER_AGENTS`)
- **max\_tries** (*int*) – Maximum number of times to try logging in
- **session\_cookies** (*dict*) – Cookies from a previous session (Will default to login if these are invalid)
- **logging\_level** (*int*) – Configures the `logging level`. Defaults to *INFO*

**Raises** `FBchatException` on failed login

**acceptUsersToGroup** (*user\_ids, thread\_id=None*)

Accepts users to the group from the group's approval

#### Parameters

- **user\_ids** – One or more user IDs to accept
- **thread\_id** – Group ID to accept users to. See *Threads*

**Raises** `FBchatException` if request failed

**addGroupAdmins** (*admin\_ids, thread\_id=None*)

Sets specified users as group admins.

#### Parameters

- **admin\_ids** – One or more user IDs to set admin
- **thread\_id** – Group ID to remove people from. See *Threads*

**Raises** `FBchatException` if request failed

**addUsersToGroup** (*user\_ids, thread\_id=None*)

Adds users to a group.

#### Parameters

- **user\_ids** (*list*) – One or more user IDs to add
- **thread\_id** – Group ID to add people to. See *Threads*

**Raises** FBchatException if request failed

**blockUser** (*user\_id*)

Blocks messages from a specified user

**Parameters** **user\_id** – The ID of the user that you want to block

**Returns** Whether the request was successful

**Raises** FBchatException if request failed

**changeGroupApprovalMode** (*require\_admin\_approval, thread\_id=None*)

Changes group's approval mode

**Parameters**

- **require\_admin\_approval** – True or False
- **thread\_id** – Group ID to remove people from. See *Threads*

**Raises** FBchatException if request failed

**changeGroupImageLocal** (*image\_path, thread\_id=None*)

Changes a thread image from a local path

**Parameters**

- **image\_path** – Path of an image to upload and change
- **thread\_id** – User/Group ID to change image. See *Threads*

**Raises** FBchatException if request failed

**changeGroupImageRemote** (*image\_url, thread\_id=None*)

Changes a thread image from a URL

**Parameters**

- **image\_url** – URL of an image to upload and change
- **thread\_id** – User/Group ID to change image. See *Threads*

**Raises** FBchatException if request failed

**changeNickname** (*nickname, user\_id, thread\_id=None, thread\_type=ThreadType.USER*)

Changes the nickname of a user in a thread

**Parameters**

- **nickname** – New nickname
- **user\_id** – User that will have their nickname changed
- **thread\_id** – User/Group ID to change color of. See *Threads*
- **thread\_type** (*models.ThreadType*) – See *Threads*

**Raises** FBchatException if request failed

**changePlanParticipation** (*plan, take\_part=True*)

Changes participation in a plan

**Parameters**

- **plan** – Plan to take part in or not

- **take\_part** – Whether to take part in the plan

**Raises** FBchatException if request failed

**changeThreadColor** (*color, thread\_id=None*)

Changes thread color

**Parameters**

- **color** (`models.ThreadColor`) – New thread color
- **thread\_id** – User/Group ID to change color of. See *Threads*

**Raises** FBchatException if request failed

**changeThreadEmoji** (*emoji, thread\_id=None*)

Changes thread emoji

Trivia: While changing the emoji, the Facebook web client actually sends multiple different requests, though only this one is required to make the change

**Parameters**

- **color** – New thread emoji
- **thread\_id** – User/Group ID to change emoji of. See *Threads*

**Raises** FBchatException if request failed

**changeThreadTitle** (*title, thread\_id=None, thread\_type=ThreadType.USER*)

Changes title of a thread. If this is executed on a user thread, this will change the nickname of that user, effectively changing the title

**Parameters**

- **title** – New group thread title
- **thread\_id** – Group ID to change title of. See *Threads*
- **thread\_type** (`models.ThreadType`) – See *Threads*

**Raises** FBchatException if request failed

**createGroup** (*message, user\_ids*)

Creates a group with the given ids

**Parameters**

- **message** – The initial message
- **user\_ids** – A list of users to create the group with.

**Returns** ID of the new group

**Raises** FBchatException if request failed

**createPlan** (*plan, thread\_id=None*)

Sets a plan

**Parameters**

- **plan** (`models.Plan`) – Plan to set
- **thread\_id** – User/Group ID to send plan to. See *Threads*

**Raises** FBchatException if request failed

**createPoll** (*poll, thread\_id=None*)

Creates poll in a group thread

**Parameters**

- **poll** (`models.Poll`) – Poll to create
- **thread\_id** – User/Group ID to create poll in. See *Threads*

**Raises** FBchatException if request failed

**deleteMessages** (*message\_ids*)

Deletes specified messages

**Parameters** **message\_ids** – Message IDs to delete

**Returns** Whether the request was successful

**Raises** FBchatException if request failed

**deletePlan** (*plan*)

Deletes a plan

**Parameters** **plan** – Plan to delete

**Raises** FBchatException if request failed

**deleteThreads** (*thread\_ids*)

Deletes threads

**Parameters** **thread\_ids** – Thread IDs to delete. See *Threads*

**Returns** Whether the request was successful

**Raises** FBchatException if request failed

**denyUsersFromGroup** (*user\_ids*, *thread\_id=None*)

Denies users from the group's approval

**Parameters**

- **user\_ids** – One or more user IDs to deny
- **thread\_id** – Group ID to deny users from. See *Threads*

**Raises** FBchatException if request failed

**doOneListen** (*markAlive=True*)

Does one cycle of the listening loop. This method is useful if you want to control fbchat from an external event loop

**Parameters** **markAlive** (*bool*) – Whether this should ping the Facebook server before running

**Returns** Whether the loop should keep running

**Return type** `bool`

**editPlan** (*plan*, *new\_plan*)

Edits a plan

**Parameters**

- **plan** (`models.Plan`) – Plan to edit
- **new\_plan** – New plan

**Raises** FBchatException if request failed

**eventReminder** (*thread\_id*, *time*, *title*, *location=""*, *location\_id=""*)

Deprecated. Use `fbchat.Client.createPlan` instead

**fetchAllUsers** ()

Gets all users the client is currently chatting with

**Returns** *models.User* objects

**Return type** list

**Raises** FBchatException if request failed

**fetchGroupInfo** (\*group\_ids)

Get groups' info from IDs, unordered

**Parameters** **group\_ids** – One or more group ID(s) to query

**Returns** *models.Group* objects, labeled by their ID

**Return type** dict

**Raises** FBchatException if request failed

**fetchImageUrl** (image\_id)

Fetches the url to the original image from an image attachment ID

**Parameters** **image\_id** (*str*) – The image you want to fetch

**Returns** An url where you can download the original image

**Return type** str

**Raises** FBChatException if request failed

**fetchMessageInfo** (mid, thread\_id=None)

Fetches *models.Message* object from the message id

**Parameters**

- **mid** – Message ID to fetch from
- **thread\_id** – User/Group ID to get message info from. See *Threads*

**Returns** *models.Message* object

**Return type** *models.Message*

**Raises** FBChatException if request failed

**fetchPageInfo** (\*page\_ids)

Get pages' info from IDs, unordered

<b>Warning:</b> Sends two requests, to fetch all available info!
--

**Parameters** **page\_ids** – One or more page ID(s) to query

**Returns** *models.Page* objects, labeled by their ID

**Return type** dict

**Raises** FBchatException if request failed

**fetchPlanInfo** (plan\_id)

Fetches a *models.Plan* object from the plan id

**Parameters** **plan\_id** – Plan ID to fetch from

**Returns** *models.Plan* object

**Return type** *models.Plan*

**Raises** FBChatException if request failed

**fetchPollOptions** (*poll\_id*)

Fetches list of *models.PollOption* objects from the poll id

**Parameters** *poll\_id* – Poll ID to fetch from

**Return type** *list*

**Raises** FBChatException if request failed

**fetchThreadInfo** (*\*thread\_ids*)

Get threads' info from IDs, unordered

**Warning:** Sends two requests if users or pages are present, to fetch all available info!

**Parameters** *thread\_ids* – One or more thread ID(s) to query

**Returns** *models.Thread* objects, labeled by their ID

**Return type** *dict*

**Raises** FBchatException if request failed

**fetchThreadList** (*offset=None, limit=20, thread\_location=ThreadLocation.INBOX, before=None*)

Get thread list of your facebook account

**Parameters**

- **offset** – Deprecated. Do not use!
- **limit** (*int*) – Max. number of threads to retrieve. Capped at 20
- **thread\_location** – *models.ThreadLocation*: INBOX, PENDING, ARCHIVED or OTHER
- **before** (*int*) – A timestamp (in milliseconds), indicating from which point to retrieve threads

**Returns** *models.Thread* objects

**Return type** *list*

**Raises** FBchatException if request failed

**fetchThreadMessages** (*thread\_id=None, limit=20, before=None*)

Get the last messages in a thread

**Parameters**

- **thread\_id** – User/Group ID to get messages from. See *Threads*
- **limit** (*int*) – Max. number of messages to retrieve
- **before** (*int*) – A timestamp, indicating from which point to retrieve messages

**Returns** *models.Message* objects

**Return type** *list*

**Raises** FBchatException if request failed

**fetchUnread()**

Get the unread thread list

**Returns** List of unread thread ids**Return type** `list`**Raises** `FBchatException` if request failed**fetchUnseen()**

Get the unseen (new) thread list

**Returns** List of unseen thread ids**Return type** `list`**Raises** `FBchatException` if request failed**fetchUserInfo(\*user\_ids)**

Get users' info from IDs, unordered

**Warning:** Sends two requests, to fetch all available info!**Parameters** `user_ids` – One or more user ID(s) to query**Returns** `models.User` objects, labeled by their ID**Return type** `dict`**Raises** `FBchatException` if request failed**friendConnect(friend\_id)**

---

**Todo:** Documenting this

---

**getSession()**

Retrieves session cookies

**Returns** A dictionary containing session cookies**Return type** `dict`**graphql\_request(query)**Shorthand for `graphql_requests(query)[0]`**Raises** `FBchatException` if request failed**graphql\_requests(\*queries)**

---

**Todo:** Documenting this

---

**Raises** `FBchatException` if request failed**isLoggedIn()**

Sends a request to Facebook to check the login status

**Returns** True if the client is still logged in

**Return type** `bool`

**listen** (*markAlive=True*)

Initializes and runs the listening loop continually

**Parameters** **markAlive** (*bool*) – Whether this should ping the Facebook server each time the loop runs

**listening = False**

Whether the client is listening. Used when creating an external event loop to determine when to stop listening

**login** (*email, password, max\_tries=5*)

Uses *email* and *password* to login the user (If the user is already logged in, this will do a re-login)

**Parameters**

- **email** – Facebook *email* or *id* or *phone number*
- **password** – Facebook account password
- **max\_tries** (*int*) – Maximum number of times to try logging in

**Raises** `FBchatException` on failed login

**logout** ()

Safely logs out the client

**Parameters** **timeout** – See [requests timeout](#)

**Returns** True if the action was successful

**Return type** `bool`

**markAsDelivered** (*thread\_id, message\_id*)

Mark a message as delivered

**Parameters**

- **thread\_id** – User/Group ID to which the message belongs. See [Threads](#)
- **message\_id** – Message ID to set as delivered. See [Threads](#)

**Returns** Whether the request was successful

**Raises** `FBchatException` if request failed

**markAsRead** (*thread\_ids=None*)

Mark threads as read All messages inside the threads will be marked as read

**Parameters** **thread\_ids** – User/Group IDs to set as read. See [Threads](#)

**Returns** Whether the request was successful

**Raises** `FBchatException` if request failed

**markAsSeen** ()

---

**Todo:** Documenting this

---

**markAsSpam** (*thread\_id=None*)

Mark a thread as spam and delete it

**Parameters** `thread_id` – User/Group ID to mark as spam. See *Threads*

**Returns** Whether the request was successful

**Raises** FBchatException if request failed

**markAsUnread** (*thread\_ids=None*)

Mark threads as unread All messages inside the threads will be marked as unread

**Parameters** `thread_ids` – User/Group IDs to set as unread. See *Threads*

**Returns** Whether the request was successful

**Raises** FBchatException if request failed

**moveThreads** (*location, thread\_ids*)

Moves threads to specified location

**Parameters**

- `location` – models.ThreadLocation: INBOX, PENDING, ARCHIVED or OTHER
- `thread_ids` – Thread IDs to move. See *Threads*

**Returns** Whether the request was successful

**Raises** FBchatException if request failed

**muteThread** (*mute\_time=-1, thread\_id=None*)

Mutes thread

**Parameters**

- `mute_time` – Mute time in seconds, leave blank to mute forever
- `thread_id` – User/Group ID to mute. See *Threads*

**muteThreadMentions** (*mute=True, thread\_id=None*)

Mutes thread mentions

**Parameters**

- `mute` – Boolean. True to mute, False to unmute
- `thread_id` – User/Group ID to mute. See *Threads*

**muteThreadReactions** (*mute=True, thread\_id=None*)

Mutes thread reactions

**Parameters**

- `mute` – Boolean. True to mute, False to unmute
- `thread_id` – User/Group ID to mute. See *Threads*

**on2FACode** ()

Called when a 2FA code is needed to progress

**onAdminAdded** (*mid=None, added\_id=None, author\_id=None, thread\_id=None, thread\_type=ThreadType.GROUP, ts=None, msg=None*)

Called when the client is listening, and somebody adds an admin to a group thread

**Parameters**

- `mid` – The action ID
- `added_id` – The ID of the admin who got added
- `author_id` – The ID of the person who added the admins

- **thread\_id** – Thread ID that the action was sent to. See *Threads*
- **ts** – A timestamp of the action
- **msg** – A full set of the data recieved

**onAdminRemoved** (*mid=None, removed\_id=None, author\_id=None, thread\_id=None, thread\_type=ThreadType.GROUP, ts=None, msg=None*)

Called when the client is listening, and somebody removes an admin from a group thread

**Parameters**

- **mid** – The action ID
- **removed\_id** – The ID of the admin who got removed
- **author\_id** – The ID of the person who removed the admins
- **thread\_id** – Thread ID that the action was sent to. See *Threads*
- **ts** – A timestamp of the action
- **msg** – A full set of the data recieved

**onApprovalModeChange** (*mid=None, approval\_mode=None, author\_id=None, thread\_id=None, thread\_type=ThreadType.GROUP, ts=None, msg=None*)

Called when the client is listening, and somebody changes approval mode in a group thread

**Parameters**

- **mid** – The action ID
- **approval\_mode** – True if approval mode is activated
- **author\_id** – The ID of the person who changed approval mode
- **thread\_id** – Thread ID that the action was sent to. See *Threads*
- **ts** – A timestamp of the action
- **msg** – A full set of the data recieved

**onCallEnded** (*mid=None, caller\_id=None, is\_video\_call=None, call\_duration=None, thread\_id=None, thread\_type=None, ts=None, metadata=None, msg=None*)

---

**Todo:** Make this work with private calls

---

Called when the client is listening, and somebody ends a call in a group

**Parameters**

- **mid** – The action ID
- **caller\_id** – The ID of the person who ended the call
- **is\_video\_call** – True if it was video call
- **call\_duration** – Call duration in seconds
- **thread\_id** – Thread ID that the action was sent to. See *Threads*
- **thread\_type** (*models.ThreadType*) – Type of thread that the action was sent to. See *Threads*
- **ts** – A timestamp of the action
- **metadata** – Extra metadata about the action

- **msg** – A full set of the data recieved

**onCallStarted** (*mid=None, caller\_id=None, is\_video\_call=None, thread\_id=None, thread\_type=None, ts=None, metadata=None, msg=None*)

---

**Todo:** Make this work with private calls

---

Called when the client is listening, and somebody starts a call in a group

#### Parameters

- **mid** – The action ID
- **caller\_id** – The ID of the person who started the call
- **is\_video\_call** – True if it's video call
- **thread\_id** – Thread ID that the action was sent to. See [Threads](#)
- **thread\_type** (`models.ThreadType`) – Type of thread that the action was sent to. See [Threads](#)
- **ts** – A timestamp of the action
- **metadata** – Extra metadata about the action
- **msg** – A full set of the data recieved

**onChatTimestamp** (*buddylist=None, msg=None*)

Called when the client receives chat online presence update

#### Parameters

- **buddylist** – A list of dicts with friend id and last seen timestamp
- **msg** – A full set of the data recieved

**onColorChange** (*mid=None, author\_id=None, new\_color=None, thread\_id=None, thread\_type=ThreadType.USER, ts=None, metadata=None, msg=None*)

Called when the client is listening, and somebody changes a thread's color

#### Parameters

- **mid** – The action ID
- **author\_id** – The ID of the person who changed the color
- **new\_color** (`models.ThreadColor`) – The new color
- **thread\_id** – Thread ID that the action was sent to. See [Threads](#)
- **thread\_type** (`models.ThreadType`) – Type of thread that the action was sent to. See [Threads](#)
- **ts** – A timestamp of the action
- **metadata** – Extra metadata about the action
- **msg** – A full set of the data recieved

**onEmojiChange** (*mid=None, author\_id=None, new\_emoji=None, thread\_id=None, thread\_type=ThreadType.USER, ts=None, metadata=None, msg=None*)

Called when the client is listening, and somebody changes a thread's emoji

#### Parameters

- **mid** – The action ID
- **author\_id** – The ID of the person who changed the emoji
- **new\_emoji** – The new emoji
- **thread\_id** – Thread ID that the action was sent to. See *Threads*
- **thread\_type** (`models.ThreadType`) – Type of thread that the action was sent to. See *Threads*
- **ts** – A timestamp of the action
- **metadata** – Extra metadata about the action
- **msg** – A full set of the data recieved

**onFriendRequest** (*from\_id=None, msg=None*)

Called when the client is listening, and somebody sends a friend request

**Parameters**

- **from\_id** – The ID of the person that sent the request
- **msg** – A full set of the data recieved

**onGamePlayed** (*mid=None, author\_id=None, game\_id=None, game\_name=None, score=None, leaderboard=None, thread\_id=None, thread\_type=None, ts=None, metadata=None, msg=None*)

Called when the client is listening, and somebody plays a game

**Parameters**

- **mid** – The action ID
- **author\_id** – The ID of the person who played the game
- **game\_id** – The ID of the game
- **game\_name** – Name of the game
- **score** – Score obtained in the game
- **leaderboard** – Actual leaderboard of the game in the thread
- **thread\_id** – Thread ID that the action was sent to. See *Threads*
- **thread\_type** (`models.ThreadType`) – Type of thread that the action was sent to. See *Threads*
- **ts** – A timestamp of the action
- **metadata** – Extra metadata about the action
- **msg** – A full set of the data recieved

**onImageChange** (*mid=None, author\_id=None, new\_image=None, thread\_id=None, thread\_type=ThreadType.GROUP, ts=None*)

Called when the client is listening, and somebody changes the image of a thread

**Parameters**

- **mid** – The action ID
- **new\_image** – The ID of the new image
- **author\_id** – The ID of the person who changed the image
- **thread\_id** – Thread ID that the action was sent to. See *Threads*

- **ts** – A timestamp of the action

**onInbox** (*unseen=None, unread=None, recent\_unread=None, msg=None*)

---

**Todo:** Documenting this

---

#### Parameters

- **unseen** --
- **unread** --
- **recent\_unread** --
- **msg** – A full set of the data recieved

**onListenError** (*exception=None*)

Called when an error was encountered while listening

**Parameters** **exception** – The exception that was encountered

**Returns** Whether the loop should keep running

**onListening** ()

Called when the client is listening

**onLoggedIn** (*email=None*)

Called when the client is successfully logged in

**Parameters** **email** – The email of the client

**onLoggingIn** (*email=None*)

Called when the client is logging in

**Parameters** **email** – The email of the client

**onMarkedSeen** (*threads=None, seen\_ts=None, ts=None, metadata=None, msg=None*)

Called when the client is listening, and the client has successfully marked threads as seen

#### Parameters

- **threads** – The threads that were marked
- **author\_id** – The ID of the person who changed the emoji
- **seen\_ts** – A timestamp of when the threads were seen
- **ts** – A timestamp of the action
- **metadata** – Extra metadata about the action
- **msg** – A full set of the data recieved

**onMessage** (*mid=None, author\_id=None, message=None, message\_object=None, thread\_id=None, thread\_type=ThreadType.USER, ts=None, metadata=None, msg=None*)

Called when the client is listening, and somebody sends a message

#### Parameters

- **mid** – The message ID
- **author\_id** – The ID of the author
- **message** – (deprecated. Use *message\_object.text* instead)

- **message\_object** (`models.Message`) – The message (As a *Message* object)
- **thread\_id** – Thread ID that the message was sent to. See *Threads*
- **thread\_type** (`models.ThreadType`) – Type of thread that the message was sent to. See *Threads*
- **ts** – The timestamp of the message
- **metadata** – Extra metadata about the message
- **msg** – A full set of the data recieved

**onMessageDelivered** (*msg\_ids=None, delivered\_for=None, thread\_id=None, thread\_type=ThreadType.USER, ts=None, metadata=None, msg=None*)  
Called when the client is listening, and somebody marks messages as delivered

**Parameters**

- **msg\_ids** – The messages that are marked as delivered
- **delivered\_for** – The person that marked the messages as delivered
- **thread\_id** – Thread ID that the action was sent to. See *Threads*
- **thread\_type** (`models.ThreadType`) – Type of thread that the action was sent to. See *Threads*
- **ts** – A timestamp of the action
- **metadata** – Extra metadata about the action
- **msg** – A full set of the data recieved

**onMessageError** (*exception=None, msg=None*)  
Called when an error was encountered while parsing recieved data

**Parameters**

- **exception** – The exception that was encountered
- **msg** – A full set of the data recieved

**onMessageSeen** (*seen\_by=None, thread\_id=None, thread\_type=ThreadType.USER, seen\_ts=None, ts=None, metadata=None, msg=None*)  
Called when the client is listening, and somebody marks a message as seen

**Parameters**

- **seen\_by** – The ID of the person who marked the message as seen
- **thread\_id** – Thread ID that the action was sent to. See *Threads*
- **thread\_type** (`models.ThreadType`) – Type of thread that the action was sent to. See *Threads*
- **seen\_ts** – A timestamp of when the person saw the message
- **ts** – A timestamp of the action
- **metadata** – Extra metadata about the action
- **msg** – A full set of the data recieved

**onNicknameChange** (*mid=None, author\_id=None, changed\_for=None, new\_nickname=None, thread\_id=None, thread\_type=ThreadType.USER, ts=None, metadata=None, msg=None*)  
Called when the client is listening, and somebody changes the nickname of a person

**Parameters**

- **mid** – The action ID
- **author\_id** – The ID of the person who changed the nickname
- **changed\_for** – The ID of the person whom got their nickname changed
- **new\_nickname** – The new nickname
- **thread\_id** – Thread ID that the action was sent to. See *Threads*
- **thread\_type** (`models.ThreadType`) – Type of thread that the action was sent to. See *Threads*
- **ts** – A timestamp of the action
- **metadata** – Extra metadata about the action
- **msg** – A full set of the data recieved

**onPeopleAdded** (*mid=None, added\_ids=None, author\_id=None, thread\_id=None, ts=None, msg=None*)

Called when the client is listening, and somebody adds people to a group thread

**Parameters**

- **mid** – The action ID
- **added\_ids** – The IDs of the people who got added
- **author\_id** – The ID of the person who added the people
- **thread\_id** – Thread ID that the action was sent to. See *Threads*
- **ts** – A timestamp of the action
- **msg** – A full set of the data recieved

**onPersonRemoved** (*mid=None, removed\_id=None, author\_id=None, thread\_id=None, ts=None, msg=None*)

Called when the client is listening, and somebody removes a person from a group thread

**Parameters**

- **mid** – The action ID
- **removed\_id** – The ID of the person who got removed
- **author\_id** – The ID of the person who removed the person
- **thread\_id** – Thread ID that the action was sent to. See *Threads*
- **ts** – A timestamp of the action
- **msg** – A full set of the data recieved

**onPlanCreated** (*mid=None, plan=None, author\_id=None, thread\_id=None, thread\_type=None, ts=None, metadata=None, msg=None*)

Called when the client is listening, and somebody creates a plan

**Parameters**

- **mid** – The action ID
- **plan** (`models.Plan`) – Created plan
- **author\_id** – The ID of the person who created the plan
- **thread\_id** – Thread ID that the action was sent to. See *Threads*

- **thread\_type** (`models.ThreadType`) – Type of thread that the action was sent to. See *Threads*
- **ts** – A timestamp of the action
- **metadata** – Extra metadata about the action
- **msg** – A full set of the data recieved

**onPlanDeleted** (*mid=None, plan=None, author\_id=None, thread\_id=None, thread\_type=None, ts=None, metadata=None, msg=None*)

Called when the client is listening, and somebody deletes a plan

#### Parameters

- **mid** – The action ID
- **plan** (`models.Plan`) – Deleted plan
- **author\_id** – The ID of the person who deleted the plan
- **thread\_id** – Thread ID that the action was sent to. See *Threads*
- **thread\_type** (`models.ThreadType`) – Type of thread that the action was sent to. See *Threads*
- **ts** – A timestamp of the action
- **metadata** – Extra metadata about the action
- **msg** – A full set of the data recieved

**onPlanEdited** (*mid=None, plan=None, author\_id=None, thread\_id=None, thread\_type=None, ts=None, metadata=None, msg=None*)

Called when the client is listening, and somebody edits a plan

#### Parameters

- **mid** – The action ID
- **plan** (`models.Plan`) – Edited plan
- **author\_id** – The ID of the person who edited the plan
- **thread\_id** – Thread ID that the action was sent to. See *Threads*
- **thread\_type** (`models.ThreadType`) – Type of thread that the action was sent to. See *Threads*
- **ts** – A timestamp of the action
- **metadata** – Extra metadata about the action
- **msg** – A full set of the data recieved

**onPlanEnded** (*mid=None, plan=None, thread\_id=None, thread\_type=None, ts=None, metadata=None, msg=None*)

Called when the client is listening, and a plan ends

#### Parameters

- **mid** – The action ID
- **plan** (`models.Plan`) – Ended plan
- **thread\_id** – Thread ID that the action was sent to. See *Threads*
- **thread\_type** (`models.ThreadType`) – Type of thread that the action was sent to. See *Threads*

- **ts** – A timestamp of the action
- **metadata** – Extra metadata about the action
- **msg** – A full set of the data recieved

**onPlanParticipation** (*mid=None, plan=None, take\_part=None, author\_id=None, thread\_id=None, thread\_type=None, ts=None, metadata=None, msg=None*)

Called when the client is listening, and somebody takes part in a plan or not

#### Parameters

- **mid** – The action ID
- **plan** (`models.Plan`) – Plan
- **take\_part** – Whether the person takes part in the plan or not
- **author\_id** – The ID of the person who will participate in the plan or not
- **thread\_id** – Thread ID that the action was sent to. See [Threads](#)
- **thread\_type** (`models.ThreadType`) – Type of thread that the action was sent to. See [Threads](#)
- **ts** – A timestamp of the action
- **metadata** – Extra metadata about the action
- **msg** – A full set of the data recieved

**onPollCreated** (*mid=None, poll=None, author\_id=None, thread\_id=None, thread\_type=None, ts=None, metadata=None, msg=None*)

Called when the client is listening, and somebody creates a group poll

#### Parameters

- **mid** – The action ID
- **poll** (`models.Poll`) – Created poll
- **author\_id** – The ID of the person who created the poll
- **thread\_id** – Thread ID that the action was sent to. See [Threads](#)
- **thread\_type** (`models.ThreadType`) – Type of thread that the action was sent to. See [Threads](#)
- **ts** – A timestamp of the action
- **metadata** – Extra metadata about the action
- **msg** – A full set of the data recieved

**onPollVoted** (*mid=None, poll=None, added\_options=None, removed\_options=None, author\_id=None, thread\_id=None, thread\_type=None, ts=None, metadata=None, msg=None*)

Called when the client is listening, and somebody votes in a group poll

#### Parameters

- **mid** – The action ID
- **poll** (`models.Poll`) – Poll, that user voted in
- **author\_id** – The ID of the person who voted in the poll
- **thread\_id** – Thread ID that the action was sent to. See [Threads](#)

- **thread\_type** (`models.ThreadType`) – Type of thread that the action was sent to. See *Threads*
- **ts** – A timestamp of the action
- **metadata** – Extra metadata about the action
- **msg** – A full set of the data recieved

**onQprimer** (*ts=None, msg=None*)

Called when the client just started listening

**Parameters**

- **ts** – A timestamp of the action
- **msg** – A full set of the data recieved

**onTitleChange** (*mid=None, author\_id=None, new\_title=None, thread\_id=None, thread\_type=ThreadType.USER, ts=None, metadata=None, msg=None*)

Called when the client is listening, and somebody changes the title of a thread

**Parameters**

- **mid** – The action ID
- **author\_id** – The ID of the person who changed the title
- **new\_title** – The new title
- **thread\_id** – Thread ID that the action was sent to. See *Threads*
- **thread\_type** (`models.ThreadType`) – Type of thread that the action was sent to. See *Threads*
- **ts** – A timestamp of the action
- **metadata** – Extra metadata about the action
- **msg** – A full set of the data recieved

**onTyping** (*author\_id=None, status=None, thread\_id=None, thread\_type=None, msg=None*)

Called when the client is listening, and somebody starts or stops typing into a chat

**Parameters**

- **author\_id** – The ID of the person who sent the action
- **status** – The typing status
- **thread\_id** – Thread ID that the action was sent to. See *Threads*
- **thread\_type** (`models.ThreadType`) – Type of thread that the action was sent to. See *Threads*
- **msg** – A full set of the data recieved

**onUnknownMesssageType** (*msg=None*)

Called when the client is listening, and some unknown data was recieved

**Parameters** **msg** – A full set of the data recieved

**onUserJoinedCall** (*mid=None, joined\_id=None, is\_video\_call=None, thread\_id=None, thread\_type=None, ts=None, metadata=None, msg=None*)

Called when the client is listening, and somebody joins a group call

**Parameters**

- **mid** – The action ID

- **joined\_id** – The ID of the person who joined the call
- **is\_video\_call** – True if it's video call
- **thread\_id** – Thread ID that the action was sent to. See *Threads*
- **thread\_type** (`models.ThreadType`) – Type of thread that the action was sent to. See *Threads*
- **ts** – A timestamp of the action
- **metadata** – Extra metadata about the action
- **msg** – A full set of the data recieved

**reactToMessage** (*message\_id*, *reaction*)

Reacts to a message

**Parameters**

- **message\_id** – *Message ID* to react to
- **reaction** (`models.MessageReaction`) – Reaction emoji to use

**Raises** FBchatException if request failed

**removeFriend** (*friend\_id=None*)

Removes a specifed friend from your friend list

**Parameters** **friend\_id** – The ID of the friend that you want to remove

**Returns** Returns error if the removing was unsuccessful, returns True when successful.

**removeGroupAdmins** (*admin\_ids*, *thread\_id=None*)

Removes admin status from specifed users.

**Parameters**

- **admin\_ids** – One or more user IDs to remove admin
- **thread\_id** – Group ID to remove people from. See *Threads*

**Raises** FBchatException if request failed

**removeUserFromGroup** (*user\_id*, *thread\_id=None*)

Removes users from a group.

**Parameters**

- **user\_id** – User ID to remove
- **thread\_id** – Group ID to remove people from. See *Threads*

**Raises** FBchatException if request failed

**resetDefaultThread** ()

Resets default thread

**search** (*query*, *fetch\_messages=False*, *thread\_limit=5*, *message\_limit=5*)

Searches for messages in all threads

**Parameters**

- **query** – Text to search for
- **fetch\_messages** – Whether to fetch `models.Message` objects or IDs only
- **thread\_limit** (*int*) – Max. number of threads to retrieve

- **message\_limit** (*int*) – Max. number of messages to retrieve

**Returns** Dictionary with thread IDs as keys and generators to get messages as values

**Return type** generator

**Raises** FBchatException if request failed

**searchForGroups** (*name, limit=1*)

Find and get group thread by its name

**Parameters**

- **name** – Name of the group thread
- **limit** – The max. amount of groups to fetch

**Returns** *models.Group* objects, ordered by relevance

**Return type** list

**Raises** FBchatException if request failed

**searchForMessageIDs** (*query, offset=0, limit=5, thread\_id=None*)

Find and get message IDs by query

**Parameters**

- **query** – Text to search for
- **offset** (*int*) – Number of messages to skip
- **limit** (*int*) – Max. number of messages to retrieve
- **thread\_id** – User/Group ID to search in. See *Threads*

**Returns** Found Message IDs

**Return type** generator

**Raises** FBchatException if request failed

**searchForMessages** (*query, offset=0, limit=5, thread\_id=None*)

Find and get *models.Message* objects by query

<b>Warning:</b> This method sends request for every found message ID.
---

**Parameters**

- **query** – Text to search for
- **offset** (*int*) – Number of messages to skip
- **limit** (*int*) – Max. number of messages to retrieve
- **thread\_id** – User/Group ID to search in. See *Threads*

**Returns** Found *models.Message* objects

**Return type** generator

**Raises** FBchatException if request failed

**searchForPages** (*name, limit=1*)

Find and get page by its name

**Parameters** **name** – Name of the page

**Returns** `models.Page` objects, ordered by relevance

**Return type** `list`

**Raises** `FBchatException` if request failed

**searchForThreads** (*name, limit=1*)

Find and get a thread by its name

**Parameters**

- **name** – Name of the thread
- **limit** – The max. amount of groups to fetch

**Returns** `models.User`, `models.Group` and `models.Page` objects, ordered by relevance

**Return type** `list`

**Raises** `FBchatException` if request failed

**searchForUsers** (*name, limit=1*)

Find and get user by his/her name

**Parameters**

- **name** – Name of the user
- **limit** – The max. amount of users to fetch

**Returns** `models.User` objects, ordered by relevance

**Return type** `list`

**Raises** `FBchatException` if request failed

**send** (*message, thread\_id=None, thread\_type=ThreadType.USER*)

Sends a message to a thread

**Parameters**

- **message** (`models.Message`) – Message to send
- **thread\_id** – User/Group ID to send to. See *Threads*
- **thread\_type** (`models.ThreadType`) – See *Threads*

**Returns** *Message ID* of the sent message

**Raises** `FBchatException` if request failed

**sendEmoji** (*emoji=None, size=EmojiSize.SMALL, thread\_id=None, thread\_type=ThreadType.USER*)

Deprecated. Use `fbchat.Client.send` instead

**sendImage** (*image\_id, message=None, thread\_id=None, thread\_type=ThreadType.USER, is\_gif=False*)

Deprecated. Use `fbchat.Client._sendFiles` instead

**sendLocalFiles** (*file\_paths, message=None, thread\_id=None, thread\_type=ThreadType.USER*)

Sends local files to a thread

**Parameters**

- **file\_path** – Paths of files to upload and send
- **message** – Additional message
- **thread\_id** – User/Group ID to send to. See *Threads*

- **thread\_type** (`models.ThreadType`) – See *Threads*

Returns *Message ID* of the sent files

Raises `FBchatException` if request failed

**sendLocalImage** (*image\_path*, *message=None*, *thread\_id=None*, *thread\_type=ThreadType.USER*)

Deprecated. Use `fbchat.Client.sendLocalFiles` instead

**sendMessage** (*message*, *thread\_id=None*, *thread\_type=ThreadType.USER*)

Deprecated. Use `fbchat.Client.send` instead

**sendRemoteFiles** (*file\_urls*, *message=None*, *thread\_id=None*, *thread\_type=ThreadType.USER*)

Sends files from URLs to a thread

#### Parameters

- **file\_urls** – URLs of files to upload and send
- **message** – Additional message
- **thread\_id** – User/Group ID to send to. See *Threads*
- **thread\_type** (`models.ThreadType`) – See *Threads*

Returns *Message ID* of the sent files

Raises `FBchatException` if request failed

**sendRemoteImage** (*image\_url*, *message=None*, *thread\_id=None*, *thread\_type=ThreadType.USER*)

Deprecated. Use `fbchat.Client.sendRemoteFiles` instead

**setDefaultThread** (*thread\_id*, *thread\_type*)

Sets default thread to send messages to

#### Parameters

- **thread\_id** – User/Group ID to default to. See *Threads*
- **thread\_type** (`models.ThreadType`) – See *Threads*

**setSession** (*session\_cookies*)

Loads session cookies

**Parameters** **session\_cookies** (*dict*) – A dictionary containing session cookies

**Returns** `False` if *session\_cookies* does not contain proper cookies

**Return type** `bool`

**setStatusTyping** (*status*, *thread\_id=None*, *thread\_type=None*)

Sets users typing status in a thread

#### Parameters

- **status** (`models.TypingStatus`) – Specify the typing status
- **thread\_id** – User/Group ID to change status in. See *Threads*
- **thread\_type** (`models.ThreadType`) – See *Threads*

Raises `FBchatException` if request failed

**ssl\_verify = True**

Verify ssl certificate, set to `False` to allow debugging with a proxy

**startListening** ()

Start listening from an external event loop

**Raises** FBchatException if request failed

**stopListening** ()

Cleans up the variables from startListening

**uid = None**

The ID of the client. Can be used as *thread\_id*. See *Threads* for more info.

Note: Modifying this results in undefined behaviour

**unblockUser** (*user\_id*)

Unblocks messages from a blocked user

**Parameters** **user\_id** – The ID of the user that you want to unblock

**Returns** Whether the request was successful

**Raises** FBchatException if request failed

**unmuteThread** (*thread\_id=None*)

Unmutes thread

**Parameters** **thread\_id** – User/Group ID to unmute. See *Threads*

**unmuteThreadMentions** (*thread\_id=None*)

Unmutes thread mentions

**Parameters** **thread\_id** – User/Group ID to unmute. See *Threads*

**unmuteThreadReactions** (*thread\_id=None*)

Unmutes thread reactions

**Parameters** **thread\_id** – User/Group ID to unmute. See *Threads*

**updatePollVote** (*poll\_id, option\_ids=[], new\_options=[]*)

Updates a poll vote

**Parameters**

- **poll\_id** – ID of the poll to update vote
- **option\_ids** – List of the option IDs to vote
- **new\_options** – List of the new option names
- **thread\_id** – User/Group ID to change status in. See *Threads*
- **thread\_type** (*models.ThreadType*) – See *Threads*

**Raises** FBchatException if request failed

**wave** (*wave\_first=True, thread\_id=None, thread\_type=None*)

Says hello with a wave to a thread!

**Parameters**

- **wave\_first** – Whether to wave first or wave back
- **thread\_id** – User/Group ID to send to. See *Threads*
- **thread\_type** (*models.ThreadType*) – See *Threads*

**Returns** *Message ID* of the sent message

**Raises** FBchatException if request failed

## 1.5.2 Models

These models are used in various functions, both as inputs and return values. A good tip is to write `from fbchat.models import *` at the start of your source, so you can use these models freely

```
class fbchat.models.Attachment (uid=None)
    Represents a Facebook attachment

    uid = None
        The attachment ID

class fbchat.models.AudioAttachment (filename=None, url=None, duration=None, au-
                                       dio_type=None, **kwargs)
    Represents an audio file that has been sent as a Facebook attachment

    audio_type = None
        Audio type

    duration = None
        Duration of the audioclip in milliseconds

    filename = None
        Name of the file

    url = None
        Url of the audio file

class fbchat.models.EmojiSize
    Used to specify the size of a sent emoji

    LARGE = '369239383222810'

    MEDIUM = '369239343222814'

    SMALL = '369239263222822'

class fbchat.models.Enum
    Used internally by fbchat to support enumerations

exception fbchat.models.FBchatException
    Custom exception thrown by fbchat. All exceptions in the fbchat module inherits this

exception fbchat.models.FBchatFacebookError (message, fb_error_code=None,
                                               fb_error_message=None, re-
                                               quest_status_code=None)

    fb_error_code = None
        The error code that Facebook returned

    fb_error_message = None
        The error message that Facebook returned (In the user's own language)

    request_status_code = None
        The status code that was sent in the http response (eg. 404) (Usually only set if not successful, aka. not 200)

exception fbchat.models.FBchatUserError
    Thrown by fbchat when wrong values are entered

class fbchat.models.FileAttachment (url=None, size=None, name=None, is_malicious=None,
                                       **kwargs)
    Represents a file that has been sent as a Facebook attachment
```

**is\_malicious = None**  
Whether Facebook determines that this file may be harmful

**name = None**  
Name of the file

**size = None**  
Size of the file in bytes

**url = None**  
Url where you can download the file

**class** fbchat.models.**Group** (*uid, participants=None, nicknames=None, color=None, emoji=None, \*\*kwargs*)

Represents a Facebook group. Inherits *Thread*

**color = None**  
A *ThreadColor*. The groups's message color

**emoji = None**  
The groups's default emoji

**nicknames = None**  
A dict, containing user nicknames mapped to their IDs

**participants = None**  
Unique list (set) of the group thread's participant user IDs

**class** fbchat.models.**ImageAttachment** (*original\_extension=None, width=None, height=None, is\_animated=None, thumbnail\_url=None, preview=None, large\_preview=None, animated\_preview=None, \*\*kwargs*)

Represents an image that has been sent as a Facebook attachment To retrieve the full image url, use: *fbchat.Client.fetchImageUrl*, and pass it the uid of the image attachment

**animated\_preview\_height = None**  
Height of the animated preview image

**animated\_preview\_url = None**  
URL to an animated preview of the image (eg. for gifs)

**animated\_preview\_width = None**  
Width of the animated preview image

**height = None**  
Height of original image

**is\_animated = None**  
Whether the image is animated

**large\_preview\_height = None**  
Height of the large preview image

**large\_preview\_url = None**  
URL to a large preview of the image

**large\_preview\_width = None**  
Width of the large preview image

**original\_extension = None**  
The extension of the original image (eg. 'png')

**preview\_height = None**  
Height of the medium preview image

**preview\_url = None**  
URL to a medium preview of the image

**preview\_width = None**  
Width of the medium preview image

**thumbnail\_url = None**  
URL to a thumbnail of the image

**width = None**  
Width of original image

**class** fbchat.models.**Mention** (*thread\_id, offset=0, length=10*)  
Represents a @mention

**length = None**  
The length of the mention

**offset = None**  
The character where the mention starts

**thread\_id = None**  
The thread ID the mention is pointing at

**class** fbchat.models.**Message** (*text=None, mentions=None, emoji\_size=None, sticker=None, attachments=None*)

Represents a Facebook message

**attachments = None**  
A list of attachments

**author = None**  
ID of the sender

**emoji\_size = None**  
A *EmojiSize*. Size of a sent emoji

**is\_read = None**  
Whether the message is read

**mentions = None**  
A list of *Mention* objects

**reactions = None**  
A dict with user's IDs as keys, and their *MessageReaction* as values

**sticker = None**  
A *Sticker*

**text = None**  
The actual message

**timestamp = None**  
Timestamp of when the message was sent

**uid = None**  
The message ID

**class** fbchat.models.**MessageReaction**  
Used to specify a message reaction

**ANGRY = ''**

**LOVE = ''**

```

NO = ''
SAD = ''
SMILE = ''
WOW = ''
YES = ''

```

```

class fbchat.models.Page (uid, url=None, city=None, likes=None, sub_title=None, category=None,
                          **kwargs)

```

Represents a Facebook page. Inherits *Thread*

```

category = None
    The page's category

```

```

city = None
    The name of the page's location city

```

```

likes = None
    Amount of likes the page has

```

```

sub_title = None
    Some extra information about the page

```

```

url = None
    The page's custom url

```

```

class fbchat.models.Plan (time, title, location=None, location_id=None)

```

Represents a plan

```

author_id = None
    ID of the plan creator

```

```

declined = None
    List of the people IDs who won't take part in the plan

```

```

going = None
    List of the people IDs who will take part in the plan

```

```

invited = None
    List of the people IDs who are invited to the plan

```

```

location = None
    Plan location name

```

```

location_id = None
    Plan location ID

```

```

time = None
    Plan time (unix time stamp), only precise down to the minute

```

```

title = None
    Plan title

```

```

uid = None
    ID of the plan

```

```

class fbchat.models.Poll (title, options)

```

Represents a poll

```

options = None
    List of PollOption, can be fetched with fbchat.Client.fetchPollOptions

```

**options\_count = None**  
Options count

**title = None**  
Title of the poll

**uid = None**  
ID of the poll

**class** fbchat.models.**PollOption** (*text, vote=False*)  
Represents a poll option

**text = None**  
Text of the poll option

**uid = None**  
ID of the poll option

**vote = None**  
Whether vote when creating or client voted

**voters = None**  
ID of the users who voted for this poll option

**votes\_count = None**  
Votes count

**class** fbchat.models.**Room** (*uid, admins=None, approval\_mode=None, approval\_requests=None, join\_link=None, privacy\_mode=None, \*\*kwargs*)  
Represents a Facebook room. Inherits *Group*

**admins = None**

**approval\_mode = None**

**approval\_requests = None**

**join\_link = None**

**privacy\_mode = None**

**class** fbchat.models.**ShareAttachment** (*\*\*kwargs*)  
Represents a shared item (eg. URL) that has been sent as a Facebook attachment - *Currently Incomplete!*

**class** fbchat.models.**Sticker** (*\*args, \*\*kwargs*)  
Represents a Facebook sticker that has been sent to a Facebook thread as an attachment

**frame\_rate = None**  
The frame rate the spritemap is intended to be played in

**frames\_per\_col = None**  
The amount of frames present in the spritemap pr. coloumn

**frames\_per\_row = None**  
The amount of frames present in the spritemap pr. row

**height = None**  
Height of the sticker

**is\_animated = False**  
Whether the sticker is animated

**label = None**  
The sticker's label/name

**large\_sprite\_image = None**

URL to a large spritemap

**medium\_sprite\_image = None**

URL to a medium spritemap

**pack = None**

The sticker-pack's ID

**url = None**

URL to the sticker's image

**width = None**

Width of the sticker

**class** fbchat.models.**Thread**(*\_type, uid, photo=None, name=None, last\_message\_timestamp=None, message\_count=None, plan=None*)

Represents a Facebook thread

**last\_message\_timestamp = None**

Timestamp of last message

**message\_count = None**

Number of messages in the thread

**name = None**

The name of the thread

**photo = None**

A url to the thread's picture

**plan = None**

Set *Plan*

**type = None**

Specifies the type of thread. Can be used a *thread\_type*. See *Threads* for more info

**uid = None**

The unique identifier of the thread. Can be used a *thread\_id*. See *Threads* for more info

**class** fbchat.models.**ThreadColor**

Used to specify a thread colors

**BILOBA\_FLOWER = '#a695c7'**

**BRILLIANT\_ROSE = '#ff5ca1'**

**CAMEO = '#d4a88c'**

**DEEP\_SKY\_BLUE = '#20cef5'**

**FERN = '#67b868'**

**FREE\_SPEECH\_GREEN = '#13cf13'**

**GOLDEN\_POPPY = '#ffc300'**

**LIGHT\_CORAL = '#e68585'**

**MEDIUM\_SLATE\_BLUE = '#7646ff'**

**MESSENGER\_BLUE = '#0084ff'**

**PICTON\_BLUE = '#6699cc'**

**PUMPKIN = '#ff7e29'**

```
RADICAL_RED = '#fa3c4c'
```

```
SHOCKING = '#d696bb'
```

```
VIKING = '#44bec7'
```

```
class fbchat.models.ThreadLocation
```

Used to specify where a thread is located (inbox, pending, archived, other).

```
ARCHIVED = 'ARCHIVED'
```

```
INBOX = 'INBOX'
```

```
OTHER = 'OTHER'
```

```
PENDING = 'PENDING'
```

```
class fbchat.models.ThreadType
```

Used to specify what type of Facebook thread is being used. See *Threads* for more info

```
GROUP = 2
```

```
PAGE = 3
```

```
ROOM = 4
```

```
USER = 1
```

```
class fbchat.models.TypingStatus
```

Used to specify whether the user is typing or has stopped typing

```
STOPPED = 0
```

```
TYPING = 1
```

```
class fbchat.models.User (uid, url=None, first_name=None, last_name=None, is_friend=None,
                           gender=None, affinity=None, nickname=None, own_nickname=None,
                           color=None, emoji=None, **kwargs)
```

Represents a Facebook user. Inherits *Thread*

```
affinity = None
```

From 0 to 1. How close the client is to the user

```
color = None
```

A *ThreadColor*. The message color

```
emoji = None
```

The default emoji

```
first_name = None
```

The users first name

```
gender = None
```

The user's gender

```
is_friend = None
```

Whether the user and the client are friends

```
last_name = None
```

The users last name

```
nickname = None
```

The user's nickname

```
own_nickname = None
```

The clients nickname, as seen by the user

**url = None**  
The profile url

**class** fbchat.models.VideoAttachment (*size=None, width=None, height=None, duration=None, preview\_url=None, small\_image=None, medium\_image=None, large\_image=None, \*\*kwargs*)

Represents a video that has been sent as a Facebook attachment

**duration = None**  
Length of video in milliseconds

**height = None**  
Height of original video

**large\_image\_height = None**  
Height of the large preview image

**large\_image\_url = None**  
URL to a large preview image of the video

**large\_image\_width = None**  
Width of the large preview image

**medium\_image\_height = None**  
Height of the medium preview image

**medium\_image\_url = None**  
URL to a medium preview image of the video

**medium\_image\_width = None**  
Width of the medium preview image

**preview\_url = None**  
URL to very compressed preview video

**size = None**  
Size of the original video in bytes

**small\_image\_height = None**  
Height of the small preview image

**small\_image\_url = None**  
URL to a small preview image of the video

**small\_image\_width = None**  
Width of the small preview image

**width = None**  
Width of original video

### 1.5.3 Utils

These functions and values are used internally by fbchat, and are subject to change. Do **NOT** rely on these to be backwards compatible!

**class** fbchat.utils.ReqUrl  
A class containing all urls used by *fbchat*

fbchat.utils.USER\_AGENTS = ['Mozilla/5.0 (Macintosh; Intel Mac OS X 10\_10\_2) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/42.0.2311.135 Safari/537.36']  
Default list of user agents

fbchat.utils.random() → x in the interval [0, 1).

## 1.6 Todo

This page will be periodically updated to show missing features and documentation

### 1.6.1 Missing Functionality

- **Implement Client.searchForMessage**
  - This will use the graphql request API
- Implement chatting with pages properly
- Write better FAQ
- Explain usage of graphql

### 1.6.2 Documentation

---

**Todo:** Documenting this

---

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/fbchat/checkouts/v1.4.0/fbchat/client.py:docstring of fbchat.Client.friendConnect, line 1.)

---

**Todo:** Documenting this

---

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/fbchat/checkouts/v1.4.0/fbchat/client.py:docstring of fbchat.Client.graphql\_requests, line 1.)

---

**Todo:** Documenting this

---

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/fbchat/checkouts/v1.4.0/fbchat/client.py:docstring of fbchat.Client.markAsSeen, line 1.)

---

**Todo:** Make this work with private calls

---

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/fbchat/checkouts/v1.4.0/fbchat/client.py:docstring of fbchat.Client.onCallEnded, line 1.)

---

**Todo:** Make this work with private calls

---

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/fbchat/checkouts/v1.4.0/fbchat/client.py:docstring of fbchat.Client.onCallStarted, line 1.)

---

## 1.7 FAQ

### 1.7.1 Version X broke my installation

We try to provide backwards compatibility where possible, but since we're not part of Facebook, most of the things may be broken at any point in time

Downgrade to an earlier version of fbchat, run this command

```
$ pip install fbchat==<X>
```

Where you replace <X> with the version you want to use

### 1.7.2 Will you be supporting creating posts/events/pages and so on?

We won't be focusing on anything else than chat-related things. This API is called *fbCHAT*, after all ;)

### 1.7.3 Submitting Issues

If you're having trouble with some of the snippets, or you think some of the functionality is broken, please feel free to submit an issue on [Github](#). You should first login with `logging_level` set to `logging.DEBUG`:

```
from fbchat import Client
import logging
client = Client('<email>', '<password>', logging_level=logging.DEBUG)
```

Then you can submit the relevant parts of this log, and detailed steps on how to reproduce

**Warning:** Always remove your credentials from any debug information you may provide us. Preferably, use a test account, in case you miss anything
